<sup>1</sup>Does not include forest products, but includes rubber now mostly a plantation product.

<sup>2</sup>Excess of exports.

<sup>3</sup>Excess of agricultural imports.

<sup>4</sup>Preliminary.

<sup>5</sup>Imports for consumption, 1933-34.

Bureau of Agricultural Economics.

This table supersedes table 500 in the Yearbook of Agriculture, 1931; the value of total imports and exports has been given and the imports of rubber, unmanufactured, and similar gums have been deducted from the imports of forest products and added to imports of agricultural products, also reexports of rubber, unmanufactured, and similar gums have been deducted from reexports of forest products and added to reexports of agricultural products. Rubber, unmanufactured, and similar gums, includes: Balata, gualupe, gutta-joolatong or jelutong or pontianak, gutta-percha, India rubber, crude, and India rubber scrap or refuse, fit only for remanufacture.

In the statistics of foreign commerce of the United States the Philippine Islands are treated as a foreign country. The statistics of foreign commerce include the trade of the customs districts of Alaska, Hawaii, and Puerto Rico with foreign countries, but do not include the trade of these Territories with the United States.

TABLE 443.—*Agricultural products: Value of trade between continental United States and noncontiguous Territories, 1924-25 to 1933-34*

| Year beginning July        | Puerto Rico                 |                             | Hawaii                      |                             | Alaska                      |                             |

<sup>1</sup> Preliminary.<sup>2</sup> Imports for consumption.

Bureau of Agricultural Economics; compiled from Monthly Summary of Foreign Commerce of the United States, June issues, 1933 and 1934.

In the statistics of foreign commerce of the United States, the Philippine Islands are treated as a foreign country. The statistics of foreign commerce include the trade of the customs districts of Alaska, Hawaii, and Puerto Rico with foreign countries, but do not include the trade of these Territories with the United States.

Bureau of Agricultural Economics. Computations are based on the gross exports of 44 of the most important farm products. The index numbers were calculated as follows: Quantities of various commodities exported each year were multiplied by the average yearly export prices of these commodities from July 1909 to June 1914. The sum of the values determined in this way was then divided by the average yearly value of exports from 1909-10 to 1913-14 to obtain the index.

<sup>4</sup> Preliminary.<sup>7</sup> Converted to boxes of 78 pounds.<sup>8</sup> Given in value only prior to 1922-23.<sup>9</sup> Included with "Starch" prior to 1917-18.<sup>10</sup> Jan. 1 to June 30.<sup>11</sup> Includes barley flour 1919-22. Barley flour not separately reported prior to 1919 nor since 1922.<sup>12</sup> Includes "Stems, trimmings, and scrap tobacco."<sup>13</sup> Includes maple sugar, 1919-34.

Bureau of Agricultural Economics; compiled from Foreign Commerce and Navigation of the United States, 1909-18, and Monthly Summary of Foreign Commerce of the United States, June issues 1919-34. Conversion factors used: Corn meal, 1 barrel=4 bushels corn; oatmeal, 18 pounds=1 bushel oats; rye flour, 1 barrel=6 bushels rye; malt, 1.1 bushels=1 bushel barley; wheat flour, 1 barrel=1909-17, 4.7 bushels grain; 1918 and 1919, 4.6 bushels; 1920, 4.6 bushels; 1921-34, 4.7 bushels; apples, 3 boxes=1 barrel. The unit "1,000 pounds" in the columns of canned goods is presumed to be net weight, according to Government regulations.

TABLE 448.—Imports of selected agricultural products, annual 1909-10 to 1933-34

| Year beginning July        | Butter       | Cheese       | Milk, fresh <sup>1</sup> | Cream, fresh <sup>1</sup> | Beef and veal, fresh | Beef, corned <sup>2</sup> | Cattle hides, excluding calf and kip |                  | Goat-skins   | Total hides and skins (except furs) | Wool, unmanufactured, including mohair, etc. |

<sup>1</sup> Included with condensed and reported in value only prior to 1918-19. Includes cream, fresh 1918-19 to 1923-24. Beginning 1924-25 reported as milk, sweet, sour, and buttermilk.

<sup>2</sup> Included in "all other articles" prior to 1909-10.

<sup>3</sup> Reported in value only prior to 1918-19. Figures are imports for consumption and include corned beef, 1913-14 to 1924-25.

<sup>4</sup> Wet salted over 25 pounds.

<sup>5</sup> Dry salted over 12 pounds.

<sup>6</sup> Not separately classified.

<sup>7</sup> Beginning Jan. 1, 1924; 6 months' figure.

<sup>8</sup> Preliminary.

<sup>9</sup> Imports for consumption beginning 1933-34.

<sup>10</sup> Bales of 473 pounds net.

<sup>11</sup> Includes "silk, raw or as reeled from cocoon," "silk waste", and "silk cocoons."

<sup>12</sup> Reported in value only.

<sup>13</sup> Beginning Sept. 22, 1922.

TABLE 448.—Imports of selected agricultural products, annual 1909-10 to 1933-34—Continued

| Year beginning July   | Bananas       | Lemons <sup>14</sup> | Beans, dry    | Onions        | Tomatoes, fresh | Almonds in terms of shelled <sup>15</sup> | Peanuts in terms of shelled <sup>15</sup> | Walnuts in terms of shelled <sup>15</sup> | Copra <sup>16</sup> | Flaxseed      |
|-----------------------|---------------|----------------------|---------------|---------------|-----------------|---|---|---|---------------------|---------------|
|                       | 1,000 bunches | 1,000 boxes          | 1,000 bushels | 1,000 bushels | 1,000 pounds    | 1,000 pounds                              | 1,000 pounds                              | 1,000 pounds                              | 1,000 pounds        | 1,000 bushels |
| 1909-10               | 38,157        | 2,165                | 1,015         | 1,024         |                 | 18,556                                    | 29,276                                    | 33,641                                    | 21,306              | 5,002         |

<sup>1</sup> Imports for consumption. (See introduction to Agricultural Statistics.)

<sup>2</sup> Not separately reported prior to 1914-15; 1914-15 to 1917-18 and 1927-28 are imports for consumption; 1918-19 to 1926-27 not available; 1928-29 to 1932-33 are general imports.

<sup>3</sup> Includes peanut oil.

<sup>4</sup> Included in all other fixed or expressed.

<sup>5</sup> Included in tung oil.

<sup>6</sup> Includes hempseed.

<sup>7</sup> Less than 500 pounds.

<sup>8</sup> Preliminary.

Bureau of Agricultural Economics; compiled from Foreign Commerce and Navigation of the United States, 1910-18; Monthly Summary of Foreign Commerce of the United States, June issues, 1919-34.

<sup>1</sup> All purposes.

<sup>2</sup> Pounds.

<sup>3</sup> For hay and forage, but not included in tame hay.

<sup>4</sup> Bushels of 25 pounds.

<sup>5</sup> Bags of 100 pounds.

<sup>6</sup> Covers only mature crop gathered for the beans, peas, or peanuts.

<sup>7</sup> Includes some quantities not harvested.

<sup>8</sup> Production is the total for fresh fruit, juice, and raisins.

<sup>9</sup> Includes 977,000 boxes of California oranges for charity.

<sup>10</sup> Trees tapped.

<sup>11</sup> Total equivalent sugar per tree.

<sup>1</sup> These index numbers are based on estimates of production of farm products for sale or for consumption in the farm home. Products fed to livestock, used for seed or in other forms of production are not included. Only the amounts of corn and oats sold for grain and only that part of the hay crop sold from farms are included. Production of meat animals is represented by total slaughter, including slaughter for farm use. The index number of dairy products production represents total milk produced for all purposes except whole milk fed to calves. Calendar-year production of livestock and livestock products is compared with crop production of the same year. Each group index, as well as the total, is obtained by multiplying the yearly quantities by a 1924-29 average farm price received by producers for each of the commodities, and the sum of these yearly values at average prices, divided by the corresponding average sum for the period 1924-29 taken as 100. The commodities included in constructing the index contributed about 93 percent of the gross income from agricultural production during the years 1924-29. The commodities included in each group are: Grains—wheat, corn, oats, barley, rye, buckwheat, flaxseed, rice, grain sorghum; fruits and vegetables—grapes, apples, apricots, peaches, pears, cranberries, figs, grapefruit, oranges, lemons, olives, potatoes, sweetpotatoes, dry edible beans; truck crops—asparagus, snap beans, beets, cabbage, cantaloups, carrots, cauliflower, celery, cucumbers, eggplant, lettuce, onions, peas, peppers, spinach, strawberries, tomatoes, watermelons; cotton and cottonseed; all crops include tobacco and hay in addition to all previous items; meat animals—cattle, calves, sheep, lambs, hogs; dairy products—milk total production less milk fed to calves; poultry products—chickens and eggs; all livestock and livestock products include wool in addition to the livestock and livestock products mentioned; the total index is the combined index of all crops and all livestock and livestock products.

| United States.....  | *354,670,800      | *324,069,700 | *283,584,200 | 2,860,645               | 4,100,712            | 4,764,507            |

<sup>1</sup> Includes corn (all), oats, barley, grain sorghum (all), wheat (all), rye, buckwheat, flaxseed, rice, beans (dry edible), soybeans alone, cowpeas alone, peanuts alone, velvetbeans alone, tame hay (all), wild hay, sorgo for forage and hay, timothy seed, red and alsike clover seed, sweetclover seed, lespedeza seed, alfalfa seed, cotton, tobacco, sorgo sirup, sugarcane (Louisiana), sugarcane sirup (except Louisiana), sugar beets, broomcorn, potatoes, sweetpotatoes, asparagus, snap beans, cabbage, cantaloups, cauliflower, celery, sweet corn (for canning), cucumbers, lettuce, onions, peas, spinach, tomatoes, watermelons; farm value also includes cottonseed, apples (all), peaches, pears, grapes, cranberries, oranges, hops, cherries, pecans, grapefruit, lemons, limes, apricots, plums, prunes (all), figs, olives, almonds, walnuts, maple products.

<sup>2</sup> Based on price received by producers Dec. 1, except for some early marketed crops for which price for marketing season is used, and differs from prices used in tables 481 and 462.

<sup>3</sup> Differs from total in table 458 in that cranberries, hops, artichokes, beets, carrots, eggplant, kale, lima beans, peppers, pimientos, sweet corn (for market), and strawberries are excluded, and for annual legumes only acreage grown alone is included.

Bureau of Agricultural Economics; estimates of the Crop Reporting Board.

<sup>1</sup> Preliminary.<sup>2</sup> Does not include \$271,024,000 benefit payments on wheat, cotton, and tobacco, under the Agricultural Adjustment Administration.<sup>3</sup> Includes \$30,643,000, value of hogs slaughtered under Agricultural Adjustment Administration reduction plan, Aug. 23 to Oct. 7, 1933.

Bureau of Agricultural Economics. Estimated quantities produced, sold, and consumed in farm households equals times weighted annual prices. Cash income plus value of commodities consumed in farm households equals gross incomes. For feed and seed crops, horses, and mules, value includes sales by farmers in some States eventually bought by farmers in other States. These interfarm sales tend to overestimate the total income from farm production for the country as a whole.

TABLE 463.—*Gross income from farm production by groups of commodities, expenditures, income available for operators' capital, labor, and management and current value of capital employed in agriculture, United States, 1924-33*

<sup>1</sup> Estimates since 1929 have been adjusted to the revised estimates of production which were made after the 1930 census data became available. Estimates of income from 1924-28 have not yet been adjusted to revised production estimates. The 1929 estimate of income from crops, comparable with the estimates of 1924-28, was \$5,609,000,000 and 1929 estimate of livestock was \$6,302,000,000; total gross income on old base for 1929 was \$11,950,000,000 compared with \$11,941,000,000 when revised.

<sup>2</sup> All of the current operating costs except 7.5 percent of fertilizer costs, 9.5 percent of feed, 10 percent of binder twine, and 15 percent of ginning costs which are estimated as paid by nonfarmer landlords.

<sup>3</sup> Depreciation of farm buildings and farm equipment is based upon the value of buildings and farm equipment according to the 1919 and 1929 census, the amount spent for replacements on buildings and machinery and price changes for farm machinery and building materials. While the rate of depreciation fluctuates slightly from year to year, during the last 14 years it has averaged about 5 percent of the value of farm buildings and 21 percent of the value of machinery, automobiles, and trucks.

<sup>4</sup> Cash wages to hired labor plus an allowance of 25 percent for board and an additional 12½ percent of the cash wage to represent perquisites furnished hired labor and domestic hired labor contributing to production. Includes only that portion of interest payable by farm operators; figured at 75 percent of all interest payable on farm mortgage debt on real estate used in production and interest on all bank loans, other than real estate loans. It is assumed that 70 percent of all taxes on farm property used in production are paid by farm operators and that 72 percent of all rent paid is paid to nonfarmer landlords.

| 1933 <sup>11</sup> ..... | 35,812   | 6,256  | 426                                  | 353               | 118                     | 215   | 380  | 62                   | 385                | 442                                 |

<sup>1</sup> As of Jan. 1. Includes land, buildings, machinery, and livestock. Estimates are census values for census years. The value of land and buildings for intercensal years is based on the index of land values per acre and a straight-line interpolation of total acreage in farms. Livestock values are annual estimates of the U. S. Department of Agriculture. Value of farm machinery is based on estimated purchases of farm machinery and changes in the prices paid by farmers for farm machinery.

<sup>2</sup> For years 1924-33, see table 463. The estimates for 1909-23 are based on items which represent about 95 percent of the gross income in 1924-33.

<sup>3</sup> Estimates from 1909-24 based on interpolations between census estimates and the index of farm wage rates; 1924-33 upon farm-wage rate, changes in the number of hired laborers per farm, and the number of farms.

<sup>4</sup> From 1909 to 1919 interpolation between census years based on an index of prices paid by farmers for feed and an index of production of feed crops. From 1919 to 1933 estimates are based on prices of feed crops, production of byproducts feeds and sales of feed grains and hay which are not used in industry or exported.

<sup>5</sup> Interpolated between census estimates based on estimated total fertilizer consumption and the U. S. Department of Agriculture index of fertilizer prices paid by farmers.

<sup>6</sup> Value of farm implements interpolated between the 1909, 1914, and 1919 census value of implements produced, after adjustment to represent retail values. Interpolations for other years are based on factory values of farm implements sold in the United States and raised to retail values. Farmers' expenditures for automobiles and trucks are estimated from registrations in principal agricultural States and prices paid by farmers.

<sup>7</sup> Includes the estimated cost of operating trucks, tractors, and one-half of the cost of operating automobiles. Expenditures per vehicle are based upon changes in the prices of gasoline, kerosene, oil and tires, licenses, and estimated annual mileage. Cost of operation is estimated cost per vehicle times estimated number of vehicles on farms.

<sup>8</sup> Annual cotton production multiplied by ginning costs per bale.

<sup>9</sup> Revised estimates of taxes are based on a study of real-estate taxes by States. In adjusting for total taxes it is assumed that the real estate tax is 85 percent and personal property tax is 15 percent of the total.

<sup>10</sup> Interpolations between total farm mortgages for 1910, 1920, 1925, 1928, 1930, using smoothed estimates for 1911-19 derived from value of current agricultural capital, and smooth curve, 1920-30.

<sup>11</sup> Preliminary.

Bureau of Agricultural Economics; tentative estimates of the Bureau

TABLE 463.—*Gross income from farm production by groups of commodities, expenditures, income available for operators' capital, labor, and management and current value of capital employed in agriculture, United States, 1924-33*

<sup>1</sup> Estimates since 1929 have been adjusted to the revised estimates of production which were made after the 1930 census data became available. Estimates of income from 1924-28 have not yet been adjusted to revised production estimates. The 1929 estimate of income from crops, comparable with the estimates of 1924-28, was \$5,609,000,000 and 1929 estimate of livestock was \$6,302,000,000; total gross income on old base for 1929 was \$11,950,000,000 compared with \$11,941,000,000 when revised.

<sup>2</sup> All of the current operating costs except 7.5 percent of fertilizer costs, 9.5 percent of feed, 10 percent of binder twine, and 15 percent of ginning costs which are estimated as paid by nonfarmer landlords.

<sup>3</sup> Depreciation of farm buildings and farm equipment is based upon the value of buildings and farm equipment according to the 1919 and 1929 census, the amount spent for replacements on buildings and machinery and price changes for farm machinery and building materials. While the rate of depreciation fluctuates slightly from year to year, during the last 14 years it has averaged about 5 percent of the value of farm buildings and 21 percent of the value of machinery, automobiles, and trucks.

<sup>4</sup> Cash wages to hired labor plus an allowance of 25 percent for board and an additional 12½ percent of the cash wage to represent perquisites furnished hired labor and domestic hired labor contributing to production. Includes only that portion of interest payable by farm operators; figured at 75 percent of all interest payable on farm mortgage debt on real estate used in production and interest on all bank loans, other than real estate loans. It is assumed that 70 percent of all taxes on farm property used in production are paid by farm operators and that 72 percent of all rent paid is paid to nonfarmer landlords.

Bureau of Agricultural Economics.

| 1933 <sup>11</sup> ..... | 35,812                                | 6,256  | 426                                  | 353               | 118                     | 215   | 380  | 62                   | 385                | 442                                 |

<sup>1</sup> As of Jan. 1. Includes land, buildings, machinery, and livestock. Estimates are census values for census years. The value of land and buildings for intercensal years is based on the index of land values per acre and a straight-line interpolation of total acreage in farms. Livestock values are annual estimates of the U. S. Department of Agriculture. Value of farm machinery is based on estimated purchases of farm machinery and changes in the prices paid by farmers for farm machinery.

<sup>2</sup> For years 1924-33, see table 463. The estimates for 1909-23 are based on items which represent about 95 percent of the gross income in 1924-33.

<sup>3</sup> Estimates from 1909-24 based on interpolations between census estimates and the index of farm wage rates; 1924-33 upon farm-wage rate, changes in the number of hired laborers per farm, and the number of farms.

<sup>4</sup> From 1909 to 1919 interpolation between census years based on an index of prices paid by farmers for feed and an index of production of feed crops. From 1919 to 1933 estimates are based on prices of feed crops, production of byproducts feeds and sales of feed grains and hay which are not used in industry or exported.

<sup>5</sup> Interpolated between census estimates based on estimated total fertilizer consumption and the U. S. Department of Agriculture index of fertilizer prices paid by farmers.

<sup>6</sup> Value of farm implements interpolated between the 1909, 1914, and 1919 census value of implements produced, after adjustment to represent retail values. Interpolations for other years are based on factory values of farm implements sold in the United States and raised to retail values. Farmers' expenditures for automobiles and trucks are estimated from registrations in principal agricultural States and prices paid by farmers.

<sup>7</sup> Includes the estimated cost of operating trucks, tractors, and one-half of the cost of operating automobiles. Expenditures per vehicle are based upon changes in the prices of gasoline, kerosene, oil and tires, licenses, and estimated annual mileage. Cost of operation is estimated cost per vehicle times estimated number of vehicles on farms.

<sup>8</sup> Annual cotton production multiplied by ginning costs per bale.

<sup>9</sup> Revised estimates of taxes are based on a study of real-estate taxes by States. In adjusting for total taxes it is assumed that the real estate tax is 85 percent and personal property tax is 15 percent of the total.

<sup>10</sup> Interpolations between total farm mortgages for 1910, 1920, 1925, 1928, 1930, using smoothed estimates for 1911-19 derived from value of current agricultural capital, and smooth curve, 1920-30.

<sup>11</sup> Preliminary.

Bureau of Agricultural Economics; tentative estimates of the Bureau

TABLE 465.—*Total population and farm population, United States: Total number Apr. 15, 1910, and yearly Jan. 1, 1920-35, annual movement to and from farms, and annual net change in the farm population 1920-34*<sup>1</sup>

<sup>1</sup> Unless otherwise stated, these data are revised estimates based upon information furnished by farm families to the Bureau of Agricultural Economics adjusted to the trends indicated by the census data of 1920 and 1930.

<sup>2</sup> Except for 1910 and 1920, these are estimates by the Bureau of the Census.

<sup>3</sup> Census enumerations as of Apr. 15, 1910, and Jan. 1, 1920.

<sup>4</sup> Estimated by the Bureau of the Census.

<sup>5</sup> Net gain in farm population instead of loss.

<sup>6</sup> Net movement to farms during the year, a reversal of the earlier trend.

<sup>7</sup> Estimates since 1930 subject to revision following next census enumeration.

<sup>8</sup> Estimate not available when Yearbook went to press.

Bureau of Agricultural Economics.

<sup>1</sup> Preliminary estimates. In computing averages, data were weighted by acreage harvested.<sup>2</sup> Obtained by dividing the production of lint in terms of 500-pound gross-weight bales by the acreage harvested.<sup>3</sup> Includes hauling and spreading manure.<sup>4</sup> Includes picking and snapping cotton, baling to gin, and hauling lint and cottonseed to local markets.<sup>5</sup> Includes miscellaneous labor, irrigation (including water), dusting, picking sacks and sheels, crop insurance, use of implements, use of storage buildings, and overhead.<sup>6</sup> Includes the lower and upper coastal plain of Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and the black prairie belt of Alabama and Mississippi.<sup>7</sup> Includes the rolling and hilly uplands of Virginia, North Carolina, South Carolina, Georgia, and Alabama, which border the Blue Ridge Mountains on the east and south.<sup>8</sup> Includes Tennessee, exclusive of Lake County, the hilly cotton lands of northern Mississippi, northern Alabama, and northern Georgia, and western North Carolina.<sup>9</sup> Includes the principal bottom lands of the Mississippi, the Arkansas, and the Red Rivers.<sup>10</sup> Includes the hilly lands of Arkansas, Louisiana, southern Missouri, eastern Texas, and eastern Oklahoma.<sup>11</sup> Includes the Gulf coast prairie of Texas and Louisiana and the black waxy prairie of Texas.<sup>12</sup> Includes the dry-land areas of western Oklahoma, western Texas, and eastern New Mexico.<sup>13</sup> Includes the irrigated cotton lands of California, Arizona, New Mexico, and Texas.<sup>14</sup> Includes the 16 States of Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Tennessee, Mississippi, Louisiana, Arkansas, Missouri, Oklahoma, Texas, New Mexico, Arizona, and California, which produced 99.9 percent of the United States cotton crop of 1933.

<sup>1</sup> Preliminary estimates. States grouped mainly on a basis of production practices and yields. In computing averages, data were weighted by acreage harvested.

<sup>2</sup> Includes threshing for wheat and oats.

<sup>3</sup> Includes charges for water for irrigation, twine and sacks, crop insurance, use of implements, use of storage buildings, overhead, and for wheat a charge for expenses incurred on acreage abandoned and not harvested.

<sup>4</sup> Includes the 6 New England States, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia, Kentucky, and Tennessee.

<sup>5</sup> Includes the States of North Carolina, South Carolina, Georgia, Florida, Alabama, and Mississippi.

<sup>6</sup> Includes the States of Arkansas, Louisiana, Oklahoma, and Texas.

<sup>7</sup> Includes the States of Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, and California.

<sup>8</sup> Includes the 6 New England States, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia, and Kentucky.

<sup>9</sup> Includes the States of North Carolina, South Carolina, Georgia, Tennessee, Alabama, and Arkansas.

<sup>10</sup> Includes the States of Idaho, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, and California.

<sup>1</sup> 1912-14=100.<sup>2</sup> Includes food, clothing, household operating expenses, furniture and furnishings, and building material for house.

Bureau of Agricultural Economics; compiled from prices reported to the Department of Agriculture by retail dealers throughout the United States. The prices used in constructing the above index numbers of prices paid by farmers are for constant quantities and sizes, but are not adjusted for changes in quality. Over a period of years marked changes may occur in the quality of certain commodities. For example, a study by the American Society of Agricultural Engineers indicated an improvement in quality of farm machinery of about 70 percent between 1910-14 and 1932.

The index numbers include only commodities bought by farmers; the commodities being weighted according to purchases reported by actual farmers in farm-management and rural-life studies from 1920 to 1925.

TABLE 471.—*Index numbers of farm prices, by groups, 1910-34*

Bureau of Agricultural Economics; prices of farm products received by producers collected monthly from a list of about 12,000 special price reporters.

This list is made up almost entirely of country-town dealers, elevator managers, buyers, and merchants. The commodities by groups are as follows: Grains—wheat, corn, oats, barley, rye, rice. Cotton and cottonseed. Fruits—apples, oranges, lemons (California), grapefruit (Florida), pears. Meat animals—cattle, calves, sheep, lambs, hogs. Dairy products—milk (wholesale), milk (retail), butter, butterfat. Chickens and eggs. Miscellaneous—potatoes, sweetpotatoes, tobacco, peanuts, wool, flaxseed, beans (dry edible), hay, horses, and mules. Commercial truck crops—tomatoes, lettuce, cantaloups, onions, cabbage, celery, beans (snap), watermelons, asparagus, peas (green), cucumbers, spinach, carrots. These index numbers of commercial truck crops, as constructed, are adjusted for seasonal variation in that the index number for any month is a percentage of the 3 corresponding months in the base period and were not constructed in unadjusted form, nor in the adjusted form prior to January 1924.

TABLE 473.—*Index numbers of wholesale prices, by groups of commodities, United States, 1910-34*<sup>1</sup>

[Calendar years 1910-14=100]

| Year      | Farm products | Foods | Hides and leather products | Textile products | Fuel and lighting | Metals and metal products | Building materials | Chemicals and drugs | House furnishing goods | Miscellaneous | All commodities |

<sup>1</sup> Computed by reducing to a 1910-14 base the Bureau of Labor Statistics series, 1926=100; the index numbers for each group on the 1926 base are divided by the monthly averages for 1910-14. The averages used for each group are as follows: Farm products, 71.3; foods, 64.5; hides and leather products, 64.5; textile products, 56.3; fuel and lighting, 52.7; metals and metal products, 85.3; building materials, 55.2; chemicals and drugs, 81.2; house furnishing goods, 54.6; miscellaneous, 110.1; and all commodities, 68.5.

<sup>1</sup> Yearly averages are from reports by crop reporters, giving average wages for the year in their localities.

<sup>2</sup> This column has significance only as an essential step in computing the wage index.

<sup>3</sup> Calendar years 1910-14=100.

<sup>4</sup> Weighted average of quarterly reports, April (weight 1), July (weight 5), October (weight 5), and January of the following year (weight 1).

Bureau of Agricultural Economics. Data for earlier years in 1928 Yearbook, table 531.

<sup>1</sup> Farm Credit Administration. Figures for the Federal land banks are rates to borrowers through national farm loan associations. Each Federal land bank district or Federal intermediate credit bank district is given equal weight in computing the respective rates for these 2 types of credit, and the rate for each district is weighted by the number of days in force. Beginning May 1933, rates payable by borrowers on new Federal land bank loans were 2 percent less than the contract rate cited, for a period of 5 years, as provided by the Emergency Farm Mortgage Act.

<sup>1</sup> This table is a supplement to table 475, 1933 Yearbook, and to table 484, 1934 Yearbook, and includes data from recent studies and other studies not available at the time of publication of the 1933 and 1934 Yearbooks.

<sup>2</sup> This number indicates the agency which obtained the data, and the letters indicate the method used in obtaining the data, as follows: 1, State university, agricultural college, or agricultural experiment station; 2, State university in cooperation with Bureau of Agricultural Economics, U. S. Department of Agriculture; 3, schedule method; R, record or account book method.

<sup>3</sup> Includes expenditures for fuel, light, household supplies, and hired help; in some cases includes also those for laundry done outside, telephone, postage, express and freight, insurance on furniture, dry-cleaning and pressing, moving charges, interest on family debts, tax, and water.

<sup>4</sup> Not included in this report.

<sup>5</sup> Not given separately.

<sup>6</sup> Evaluated at farm prices.

<sup>7</sup> Life insurance included with other savings.

<sup>8</sup> Size of family in adult-equivalent units.

<sup>9</sup> Evaluated at retail prices.

<sup>10</sup> Evaluated at 10 percent of estimated value of house.

<sup>11</sup> Schedules from identical families for consecutive years.

<sup>12</sup> Includes life insurance but no other savings.

<sup>13</sup> Includes health insurance.

<sup>14</sup> Basis of valuation not given.

<sup>15</sup> Value of fuel furnished included with value of food furnished.

<sup>16</sup> Evaluated at 9 percent of estimated value of house.

<sup>17</sup> Includes 1 family not operating a farm.

<sup>18</sup> Evaluated at 10 percent of estimated value of house.

<sup>19</sup> Schedules from identical families for consecutive years.

<sup>20</sup> Includes life insurance but no other savings.

Bureau of Home Economics.

Agricultural Adjustment Administration.

Data on contracts as approved by State boards of review; compiled from forms No. 13-A. Information on payments estimated from contract data; rental at the rate of 3½ cents per pound on lint which would have been produced on rented land, partly payment at the rate of 1 cent per pound on 40 percent of average base production (approximately the portion grown for domestic consumption). All totals shown may be reduced to some extent by contract cancellations.

TABLE 486.—*State quotas of tax-exempt cotton under provisions of the Bankhead Act, 1934, administered by the Agricultural Adjustment Administration*

| State  | 5-year average pro-duction, 1928-32 |                   | Allotment in terms of net lint | Allotment in 478-pound net-weight bales | Official esti-mated production, 1934 | Allotments in excess of pro-duction | Production in excess of allotment |
|--|-------------------------------------|-------------------|--------------------------------|---|--------------------------------------|-------------------------------------|-----------------------------------|

<sup>1</sup> Including 16,000 bales of Pima cotton which is tax free when at least 1½ inches in length and, therefore, requires no allotment.

<sup>2</sup> Section 5 (a) of the Bankhead Cotton Act of 1934 provides "That no State shall receive an allotment of less than 200,000 bales of cotton in any 1 year of 5 years prior to this date the production of the State equaled 200,000 bales." This provision was found to apply to California and Missouri only.

<sup>3</sup> In the Bankhead Cotton Act of 1934 the term "bale" means 500 pounds of lint cotton. Since ordinarily bales contain an average of 478 pounds, allotments are shown as converted to 478-pound net-weight bales.

<sup>4</sup> Producers having excess tax-exemption certificates were able to utilize them extensively in some sections as a form of crop insurance, by selling them to producers whose production was in excess of their allotments. Those certificates not so transferred could be held and exchanged for 1935 tax-exemption certificates in addition to the normal allotments of the owners.

Agricultural Adjustment Administration.

<sup>1</sup> Tobacco contracts provide allotments of production as well as acreage, except in the case of cigar-leaf tobacco. This column shows percentage reduction of allotted acreage from base acreage. Since some growers did not grow their full allotted acreage, the total harvested acreage of growers under contract was below the total acreage allotted. The Burley contract permitted choice of a reduction of either 33½ or 50 percent; binder and filler cigar-leaf contracts permitted choice of a reduction of 33½ or 50 percent or 100 percent. For flue-cured tobacco, an administrative ruling permitted choice of a reduction of 20 percent in lieu of the 30 percent provided in the contract.

<sup>2</sup> Includes all domestic types of cigar-leaf tobacco except types 45 and 61.

<sup>3</sup> Base production not established under cigar-leaf tobacco contracts.

Agricultural Adjustment Administration.

For production in 1934, see statistical tables in earlier portion of this Yearbook, under "Tobacco."

## Agricultural Adjustment Administration.

All growers having an interest in the 1934 crop of tobacco of the above types were eligible to vote upon the question, "Do you favor a tax on the sale of.....tobacco for the crop year, beginning May 1, 1935, as provided in the Kerr-Smith Act?" Growers were required to state their 1934 acreage and votes were tabulated according to the acreage voted. If any person having an interest in the 1934 crop voted "No", the entire acreage in which that person had an interest was counted as "not favoring the tax", regardless of how other persons having an interest in the same land voted. Referenda for Maryland type 32 and cigar-leaf types had not been conducted at the time this table was prepared.

<sup>1</sup> Receipts are of sugar arriving in the ports of the United States, regardless of whether they have been imported (i. e., entered through the customs) or not.

<sup>2</sup> Includes small items which may not have gone directly into consumption.

Agricultural Adjustment Administration.

All figures are preliminary, and include all overquota raw sugars held by refiners. Data compiled from reports submitted by 16 companies representing 22 refiners. The table includes all refineries in the United States except 3 Louisiana refineries melting only Louisiana raw sugars, the aggregate output of which is relatively small.

**TABLE 492.—Sugar, refined cane and beet: Stocks, production, and distribution by United States refiners and processors, 1934, compiled in the administration of the Jones-Costigan Act by the Agricultural Adjustment Administration**

| Manufacturing agency       | Jan. 1, 1934, stocks | Production        | Deliveries             | Dec. 31, 1934, stocks |
|----------------------------|----------------------|-------------------|------------------------|-----------------------|

<sup>1</sup> Includes sales for export. The Department of Commerce reported exports of 136,481 tons of refined sugar during 1934.

<sup>2</sup> Larger than actual deliveries by a small quantity representing losses in transit, through reprocessing, etc. Includes delivery of 4,500 tons to the Federal Surplus Relief Corporation.

<sup>3</sup> Equivalent to 5,858,990 short tons of 96° raw sugar.

Agricultural Adjustment Administration.

All figures are preliminary and were compiled from reports submitted by refiners and processors. Cane sugar refined by 3 Louisiana refineries, the aggregate output of which is relatively small, is not included in this table.

**TABLE 493.—Sugar: Receipts for direct consumption from specified areas, 1934**

| Source of supply        | Quantity                       | Source of supply | Quantity                       |

Headquarters of national forests:

Region 1: Federal Building, Missoula, Mont.; embracing Montana, northeastern Washington, northern Idaho, and northwestern South Dakota.

Region 2: Post Office Building, Denver, Colo.; embracing Colorado, eastern Wyoming, South Dakota, Nebraska, and western Oklahoma.

Region 3: Federal Building, Albuquerque, N. Mex.; embracing Arizona and New Mexico.

Region 4: Forest Service Building, Ogden, Utah; embracing Utah, southern Idaho, western Wyoming, and Nevada.

Region 5: Federal Building, Portland, Oreg.; embracing Oregon, Washington, and western Idaho.

Region 6: Federal Building, San Francisco, Calif.; embracing California, Nevada, and western Oregon.

Region 7: Federal Building, Washington, D. C.; embracing Virginia, West Virginia, Maryland, Delaware, Pennsylvania, Puerto Rico, Vermont, Virginia, and West Virginia.

Region 8: Glenn Building, Atlanta, Ga.; embracing Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, eastern Oklahoma, South Carolina, Tennessee, Texas, and portion of Virginia.

Region 9: Federal Building, Milwaukee, Wis.; embracing Illinois, Michigan, Minnesota, Missouri, and Wisconsin.

Region 10: Federal and Territorial Building, Juneau, Alaska; located in Alaska.

Forest Service; see 1931 Yearbook, table 554, for lists of national monuments, national game refuges, and range reserves. For later information, address the Forest Service, Washington, D. C.

<sup>1</sup> Standing timber of all species of size suitable for lumber, according to the local practice in each region as of 1930.

<sup>2</sup> Current annual growth of timber of saw-timber size.

<sup>3</sup> Cut for lumber and other commodities, averaged for the period 1925-29.

<sup>4</sup> Saw timber destroyed, averaged for the period 1925-29.

<sup>5</sup> Destruction due to insects, disease, windfall, etc., averaged for the period 1919-29.

<sup>6</sup> Includes New York, Pennsylvania, New Jersey, Delaware, and Maryland.

<sup>7</sup> Includes Ohio, Indiana, Illinois, Iowa, Kansas, Missouri, Nebraska, Tennessee, Kentucky, and West Virginia.

<sup>8</sup> Includes the coastwise States, Virginia to Texas, inclusive; also Arkansas and Oklahoma.

<sup>9</sup> Includes Idaho and Montana.

<sup>10</sup> Includes the other Rocky Mountain States and South Dakota (Black Hills).

Forest Service; from a National Plan for American Forestry, 1933.

<sup>1</sup> Average number of camps.

Forest Service.

This table reports only the forest-fire prevention and suppression work of the C. C. O. camps under the supervision of the Forest Service of the Department of Agriculture. For a similar report of the entire number of camps, see the second report of the Director of Emergency Conservation Work, 1934.

TABLE 514.—Emergency Conservation Work: Flood-control work completed Apr. 5, 1933–Mar. 31, 1934

PUBLIC WORKS PROJECTS <sup>2</sup>

|           |    |    |    |    |    |    |    |    |    |    |
|-----------|----|----|----|----|----|----|----|----|----|----|
| 1933..... | 40 | 40 | 47 | 45 | 31 | 30 | 35 | 55 | 56 | 44 |
| 1934..... | 43 | 41 | 50 | 44 | 31 | 30 | 35 | 55 | 57 | 42 |

<sup>1</sup> The volume of Federal-aid construction unaffected by the wage scales required on Public Works construction was so small in 1934 that average figures are not reported for that year.

<sup>2</sup> For these projects it is required that minimum wage rates, sufficient to provide (for the hours of labor as limited) a standard of living in decency and comfort, shall be fixed by State highway departments.

Bureau of Public Roads.

<sup>1</sup> Sold by producers. (Includes a small amount sold by Hawaii and Puerto Rico producers.)

<sup>2</sup> Partly estimated.

<sup>3</sup> Includes pulverized marble.

<sup>4</sup> Sold or used by producers.

<sup>5</sup> Includes soft rock.

<sup>6</sup> Includes a small quantity of tailings.

<sup>7</sup> Includes a small quantity of apatite from Virginia.

<sup>8</sup> Includes Idaho, Wyoming, and Montana in 1931; Idaho and Montana in 1932 and 1933.

<sup>9</sup> Approximate.

Bureau of Agricultural Economics; compiled from reports of the Bureau of Mines.

Figures for earlier years appear in previous issues of the Yearbook.

TABLE 528.—Fertilizers: Production and value, by States, 1931; United States, 1931 and 1933

| State                                  | Quantity             |                               |                                |                   | Value                |                               |                                |                |
|--|----------------------|-------------------------------|--------------------------------|-------------------|----------------------|-------------------------------|--------------------------------|----------------|
|  | Complete fertilizers | Super-phosphates <sup>1</sup> | Other fertilizers <sup>2</sup> | Total             | Complete fertilizers | Super-phosphates <sup>1</sup> | Other fertilizers <sup>2</sup> | Total          |

<sup>1</sup> Includes concentrated phosphates; basis 16-percent available phosphoric acid.<sup>2</sup> Fish scrap, potash-superphosphate, bone meal and "other fertilizers."<sup>3</sup> Included in "undistributed", in order to avoid disclosing data for individual establishments.<sup>4</sup> States, which if shown separately, would disclose the operations of individual establishments. Certain States in this group, however, outranked some of the States shown separately.<sup>5</sup> Comparable with 1933 total.<sup>6</sup> Excludes data for the smaller manufacturers in the fertilizer industry and other establishments manufacturing fertilizer products.

Bureau of Agricultural Economics. Compiled from reports of the Bureau of the Census.

<sup>1</sup> Preliminary.<sup>2</sup> Byproduct of coke ovens; production from other sources (coal, gas, bone carbonizing, etc.) is usual as than 5 percent of the total production.<sup>3</sup> Includes ammonia liquor  $\text{NH}_3$  content converted to sulphate equivalent.<sup>4</sup> Fertilizer establishments only.<sup>5</sup> Bulk superphosphate. Superphosphate in base and mixed goods excluded.<sup>6</sup> Includes kainit, manure salts, sulphate of and muriate of potash.<sup>7</sup> Originated mostly in Germany.<sup>8</sup> Originated mostly in France.

Bureau of Agricultural Economics; compiled as follows: Production and sales, sulphate of ammonia and potash from Bureau of Mines; sulphuric acid and superphosphate from Bureau of the Census; imports and exports from Bureau of Foreign and Domestic Commerce.

TABLE 531.—*Nitrogen: World production of, contained in inorganic nitrogeneous materials, 1929-34*

<sup>1</sup> Including ammonia products used for industrial purposes and ammonia in mixed fertilizers.

Bureau of Chemistry and Soils. British Sulphate of Ammonia Federation (Ltd.), annual report.

Fertilizers are included in this table under the final form as sold, so that, for example, cyanamide if converted into sulphate of ammonia is included under synthetic sulphate of ammonia, or, if into ammophos, is included under other synthetic nitrogen.

TABLE 532.—*Insecticides and fungicides: Production, sales, imports for consumption and domestic exports, 1928-33*

<sup>1</sup> Byproduct from the mining of copper, lead, and iron ores. (Bureau of Mines.) The production for sale in the "Miscellaneous Chemical Industry," as reported by the Census, was 34,352,500 pounds in 1931 and 21,152,574 pounds in 1933, with some plants not reporting.

<sup>2</sup> Sales by producers. (Bureau of Mines.)

<sup>3</sup> Copper industry only. (Bureau of Mines.) The production for sale in the "Miscellaneous Chemical Industry," as reported by the Census, was 60,816,515 pounds in 1931 and 55,949,580 pounds in 1933.

<sup>4</sup> Nicotine sulphate and "other tobacco extracts."

<sup>5</sup> Classified as sheep dip.

Bureau of Agricultural Economics; production and sales from Bureau of the Census and Bureau of Mines (indicated by footnote); imports and exports from the Bureau of Foreign and Domestic Commerce.

<sup>1</sup> Weight as delivered at original shipping point. In the case of freight transported over several different railways, each ton is counted only when transported by the first railway. Some traffic, reshipped under new billing without benefit of transit privileges or proportional rates, may be counted more than once.

<sup>2</sup> Preliminary.

Bureau of Agricultural Economics; compiled from reports of the Interstate Commerce Commission.

Figures for earlier years appear in previous issues of the Yearbook.

<sup>1</sup> Based on rates in effect through Mar. 4, 1935, except cotton which is through Mar. 7.

<sup>2</sup> To preserve comparability, where alternative rates depending on loading were established during these years, rate for highest weight to which shippers could load without having cotton compressed at own expense was used in computation of index.

<sup>3</sup> Preliminary.

Bureau of Agricultural Economics.

These relatives are based on the average of the rates in effect during the crop year. Rates in effect in 1913=100. For points of origin and destination, see Yearbook, 1926, tables 550 and 551.

<sup>1</sup> Net imports are imports minus reexports; beginning 1934, imports for consumption.

<sup>2</sup> Average of monthly average prices of Japanese Kansai, No. 1, except as noted.

<sup>3</sup> Net imports in 1924 are imports minus reexports; 1925-33 figures are imports minus exports and reexports; 1934, exports minus imports for consumption.

<sup>4</sup> Average of monthly average prices of domestic yarn, first quality. The count indicates the number of deniers or 1/16-decigram units, in weight, of a standard length of 450 meters. Since the standard is based on an arbitrary fixed length and a variable weight, the finer the yarn the smaller the count; 150 denier count, a size commonly used, is fine and 300 denier count is coarse.

<sup>5</sup> Average of monthly average prices of Japanese Best, No. 1 x 13-15.

<sup>6</sup> Preliminary.

<sup>7</sup> Net exports.

Bureau of Agricultural Economics.

Compiled from annual issues of Commerce and Navigation of the United States Department of Commerce, except production of rayon yarn which is from the Textile Organon, a publication of the Tubize Chatillon Corporation. Prices are from bulletins of the U. S. Bureau of Labor statistics.
